Wow your visitors

Make beautiful order recipients, invoices, product brochures, case studies and other downloadable documents using ExpressionEngine. We support Unicode, so other languages such as Arabic, Chinese, and Cyrillic are supported!

No Awkward Conversations

You can offer your clients unlimited HTML to PDF downloads without having to explain why they need to signup for a monthly service from PDFCrowd.

Peace of Mind

We have your back, if you have any issues with PDF Press we'll help you fix it. If PDF Press doesn't meet your needs we'll refund your purchase fully with no questions asked.

What others are saying

"Works great, and the debug view really helped with the pdf css design."

"I found this an excellent solution for a client who requested PDF versions for content on their site."

"PDF Press is awesome . . . It does exactly what I need it to do."

Overview

PDF Press is the easiest way to save your *ExpressionEngine®* templates from HTML/CSS to PDF. PDF Press is a stand-alone module, you don't need any additional services or 3rd party software.

Tags

The syntax is very easy to use, you have the option of using two *ExpressionEngine®* tags to generate a pdf

- **{exp:pdf_press:save_to_pdf}** – generates a link to download the template as a PDF and it has the following parameters:
    - **path (optional)** – accepts an *ExpressionEngine®* path to convert to a PDF, if no path is given, then the current page will be used
    - **filename (optional)** – specifies the filename for the downloaded PDF
    - **size (optional)** – specifies the paper size for the output PDF file see (ex. 'letter', 'legal', 'a5', etc). You can view all of the available sizes by checking under the "Size" dropdown of the PDF Preview tab
    - **orientation (optional)** – specifies the orientation of the content, either "portrait" (default) or "landscape"
    - **attachment (optional)** – this parameter controls whether the PDF will be automatically downloaded (attachment=1) or whether the PDF will be opened in the browser (attachment=0).
- **{exp:pdf_press:parse_pdf}...{/exp:pdf_press:parse_pdf}** – this tagpair will create a PDF file using whatever HTML & EE tags are inside the tagpair. This is useful for logged in / member only pages. It has the same parameters as "save_to_pdf" (except for 'path')

```
